Education

Towson University — Towson, MD
Bachelor of Science in Computer Science GPA: 3.543 — *Aug. 2024 – Dec. 2026*

Montgomery College — Rockville, MD
Transferred to Towson University to complete B.S. in Computer Science — *Aug. 2020 – May 2024*

Experience

Towson University — Towson, MD
Undergraduate AI Researcher — *January 2026 – May 2026*

- Designing and evaluating a dynamic routing system that adapts to select between different models to minimize cost while preserving accuracy.
- Implementing and comparing different routing strategies using model confidence and input difficulty on text-classification tasks.
- Building a framework with decision logs and performance metrics to analyze efficiency-accuracy tradeoffs and model behaviors.

SolutionsInfra — Chevy Chase, MD
AI Infrastructure Intern — *May 2025 – August 2025*

- Authored client-facing technical whitepapers analyzing multiple local LLM architectures, standardizing comparison of latency, throughput, and quantization performance.
- Compiled benchmark outputs into structured comparisons highlighting strengths, weaknesses, and recommended uses across four evaluation categories.
- Wrote a full OpenWebUI + Docker setup guide covering installation, container execution, model integration via Ollama, and Windows troubleshooting.
- Built an LLM-powered email-sorting workflow in n8n, replacing manual sorting with conditional routing and automated classification using Dockerized services.
- Provided IT support at FORT LP hedge fund offices, assisting with workstation troubleshooting and systems maintenance.
- **Selected Work:** LLM Benchmarks | OpenWebUI Guide | Email AI Agent

Charles Street Dental — Baltimore, MD
Office Clerk — *August 2020 – May 2021*

- Prepared documents and supported day-to-day patient needs.
- Handled patient concerns and communicated with insurance offices.
- Assisted with front-office processes and information management.

Projects

OCD Loop Tracker | *Flask, PostgreSQL, Docker, HuggingFace API, JavaScript, Chart.js, Render* — 2025

- Built a full-stack mental health tracking app enabling users to log events, analyze patterns of behavior, and export insights via an interactive analytics dashboard.
- Implemented a Flask REST API with PostgreSQL, deployed in Docker using Render with health and readiness probes and environment variable configuration.
- Integrated a HuggingFace emotion classification endpoint to score user notes and store AI-labeled emotions for analysis.
- Created a JavaScript/Chart.js dashboard to visualize user triggers, daily activity, and emotional trends.
- Added CSV and PDF export features using Python (csv, ReportLab).

WAV Scanner | *Java, TarsosDSP, Swing, Digital Signal Processing* — 2025

- Built a Java-based audio analysis tool that converts `.wav` files into pitch-class distributions to identify musical key using digital signal processing.
- Processed audio using DSP techniques, converting frequencies to MIDI notes and pitch-class tallies.
- Added a Swing-based file chooser and streamlined the analysis workflow.
- Designed the project for cross-machine compilation using a clean build structure.

Technical Skills

Languages: Python, JavaScript, Java, SQL (PostgreSQL), HTML/CSS
Frameworks: Flask
Developer Tools: Git, Docker, Render, VS Code, OpenWebUI, Ollama, n8n
Libraries / APIs: TarsosDSP, Swing (Java), Chart.js, ReportLab, HuggingFace Inference API, bcrypt
Concepts: Digital Signal Processing, Audio Feature Extraction, REST APIs, Containerization, CSV Export, PDF Generation, Environment Variables, Benchmarking
Databases: PostgreSQL
